

Movie App (IMDB Style) — Guide

1. What You Are Building

A complete movie web app using HTML, CSS, and JavaScript.

- 1 Fetch movies from an API
- 2 Display clean movie cards
- 3 Show trending movies in a slider
- 4 Click a movie → show full details in a modal
- 5 Handle errors properly (important!)

2. Project Structure

```
project/  
■■■index.html  
■■■style.css  
■■■script.js
```

3. Full HTML Structure

```
<!DOCTYPE html>  
<html lang="en">  
<head>  
  <meta charset="UTF-8">  
  <title>Movie App</title>  
  <link rel="stylesheet" href="style.css">  
</head>  
<body>  
  
<h1>■ Movie App</h1>  
  
<div class="slider" id="slider"></div>  
  
<div class="movies" id="movies"></div>  
  
<div class="modal hidden" id="modal"></div>  
  
<script src="script.js"></script>  
</body>  
</html>
```

This creates 3 main sections: slider, movie list, and modal.

4. Full CSS (Clean UI)

```
body {  
  background: #0f172a;  
  color: white;  
  font-family: sans-serif;
```

```

    padding: 20px;
}

.movies {
  display: grid;
  grid-template-columns: repeat(auto-fit, minmax(200px, 1fr));
  gap: 20px;
}

.movie-card {
  background: #1e293b;
  border-radius: 10px;
  overflow: hidden;
  cursor: pointer;
  transition: 0.3s;
}

.movie-card:hover {
  transform: scale(1.05);
}

.movie-card img {
  width: 100%;
}

.slider {
  display: flex;
  gap: 10px;
  overflow-x: auto;
  margin-bottom: 20px;
}

.slider img {
  width: 150px;
  border-radius: 8px;
}

.modal {
  position: fixed;
  top: 0;
  left: 0;
  width: 100%;
  height: 100%;
  background: rgba(0,0,0,0.8);
  padding: 40px;
}

.hidden {
  display: none;
}

```

5. JavaScript Setup + Fetch

```

const API_KEY = "YOUR_API_KEY";
const BASE_URL = "https://api.themoviedb.org/3";
const IMG_URL = "https://image.tmdb.org/t/p/w500";

async function fetchMovies(url) {
  try {
    const res = await fetch(url);

    if (!res.ok) {
      throw new Error("Failed to fetch movies");
    }
  }
}

```

```

    const data = await res.json();
    return data.results;

  } catch (err) {
    console.error(err);
    alert("Something went wrong!");
  }
}

```

This function handles errors properly so the app doesn't break.

6. Display Movie Cards

```

function displayMovies(movies) {
  const container = document.getElementById("movies");
  container.innerHTML = "";

  movies.forEach(movie => {
    const card = document.createElement("div");
    card.classList.add("movie-card");

    card.innerHTML = `
      
      <h3>${movie.title}</h3>
      <p>${movie.release_date}</p>
    `;

    card.addEventListener("click", () => showDetails(movie.id));

    container.appendChild(card);
  });
}

```

7. Slider (Trending)

```

function displaySlider(movies) {
  const slider = document.getElementById("slider");

  movies.slice(0, 10).forEach(movie => {
    const img = document.createElement("img");
    img.src = IMG_URL + movie.poster_path;

    img.addEventListener("click", () => showDetails(movie.id));

    slider.appendChild(img);
  });
}

```

8. Movie Details (Modal)

```

async function showDetails(id) {
  const res = await fetch(
    `${BASE_URL}/movie/${id}?api_key=${API_KEY}`
  );
  const movie = await res.json();

  const modal = document.getElementById("modal");

  modal.classList.remove("hidden");
}

```

```

    modal.innerHTML = `
      <h2>${movie.title}</h2>
      <p>${movie.overview}</p>
      <p>■ ${movie.vote_average}</p>
      <button onclick="closeModal()">Close</button>
    `;
  }

  function closeModal() {
    document.getElementById("modal").classList.add("hidden");
  }

```

9. Start the App

```

async function init() {
  const movies = await fetchMovies(
    `${BASE_URL}/movie/popular?api_key=${API_KEY}`
  );

  displayMovies(movies);
  displaySlider(movies);
}

init();

```

10. Debugging Tips (Very Important)

- 1 Always use console.log(data)
- 2 Check browser console for errors
- 3 If images don't show → check poster_path
- 4 If nothing loads → check API key

Final Advice

Build it step by step. First fetch. Then display. Then slider. Then modal. Do NOT try to do everything at once.
